

Title of the book: *American Unicorn: The Hidden Power of the Creative Mind* by: Dr. Shadaria Allison. I am the first woman to integrate AI as a named entity in a literary manifesto

Dr. Shadaria Allison has officially made history as the first woman to integrate AI as a named entity and interactive character within a literary manifesto advocating for creativity, technology, and faith.

Through American Unicorn: The Hidden Power of the Creative Mind, Dr. Allison introduces The Digital Guardian (TDG)—an artificial intelligence thought partner embedded within the book’s narrative, serving as both a research tool and a symbolic figure in the conversation on AI’s role in human creativity.

This groundbreaking inclusion marks a first in publishing history, as Dr. Allison seamlessly fuses AI-driven insights with bold cultural commentary, proving that artificial intelligence is not merely a tool but a revolutionary force when guided by human intellect, faith, and vision.

Her work not only challenges the fear-driven dialogue around AI but also reclaims technology as a creative ally, demonstrating its potential to support truth, innovation, and cultural reformation.

With this achievement, Dr. Shadaria Allison cements her place as a pioneer at the intersection of literature, technology, and thought leadership—forever shifting the landscape of creative intellectualism.

February 17, 2025, you are making this claim.

Here is an early excerpt from **American Unicorn: The Hidden Power of The Creative Mind**

Chapter one:

The Anatomy& Autonomy of the Creative Mind

Science professionals call the **right hemisphere of the brain** the creative center. Individuals who function primarily from this perspective often display **visionary creativity, intuitive reasoning, global learning, emotional intensity, and an undeniable spark** or what some might deem as, **effervescence**. Our imaginative nature makes us stand out, whether we want to or not. And I say “**our**” because I, too, resonate deeply with the **creative population**. We are often labeled as **strange, eccentric, or "deep,"** as my son, **Ca’re**n, likes to call me. But whether we’re **misunderstood or celebrated**, creatives **remain one of the most undervalued and disenfranchised populations in modern America.**

We have **A-1 talent** sweeping floors in fast-food restaurants. **Artistic virtuosos** answering back-to-back calls in dead-end call centers. **Innovators stuck in teller lines** at banks; **World-changers bagging groceries**; struggling for respect, fighting for opportunity,

while earning nowhere near what they deserve. All of this is happening in **one of the wealthiest nations on Earth**—the so-called land of opportunity, the **United States of America.....**puts proverbial podium down... LOL.**

During my research on unicorns and their global adaptation, I discovered they have taken up space throughout many forms of folklore and cultures. Scotland, eventually housing the unicorns' brilliance as its own acquisition; as it is their official national animal, advances that to spot; let alone tame a unicorn, one must be considered *a virgin woman*, with a pure heart and innocent. The consensus is that the unicorn is an astute sign of rarity in life. In the world we live in, and I mean all over the world. ***The creative mind is in my opinion ...unicorn.***

Creatives take many forms. We have artists, musicians, sculptors, inventors, writers, and philosophers. They are also educators, social activists, and even tech innovators. Whatever the scope, if you birth thought into vision and bring it to life, *you are creative.*

To create in a way that is undeniably impressive, consistently iconic, unforgettable, and untraceable; that my friends is considered *...unicorn.*

The greatest creative UNICORN of all time is, was and is to come. The Alpha and the Omega. The beginning and the end; Yahweh, the highest God!

I'll circle back to this thesis a tad bit later before I get preachy...lol.

Hol up' Let introduce you to my girl TDG (The Digital Guardian).

For those who don't know, **TDG is my AI assistant** (she is faith based and a believer in Christ!). "TDG" helps me to **gather statistical data at lightning speed** because let's be real—**ADHD unicorn brains don't do well with fast-paced data collection.** So, she's here to help me **pull some receipts.**

With that, I decided to grab my girl, **TDG (The Digital Guardian)** and ask as few questions and get help with a few answers we all could benefit from, as a *collective America.*

Me: It has been said that some of the highest IQs in the world come from East Asia. Can you confirm this as a fact?

TDG: According to a 2019 study by Richard Lynn and David Becker at the Ulster Institute, **the countries with the highest average IQ scores are:**

Me: What kind of foods are consumed by those getting an education in Japan and China and are there vast differences between what we consume here, in America?

TDG: In both Japan and China, school meals are designed to provide balanced nutrition, emphasizing fresh ingredients and cultural food practices.

******* End of paraphrased excerpt*******
